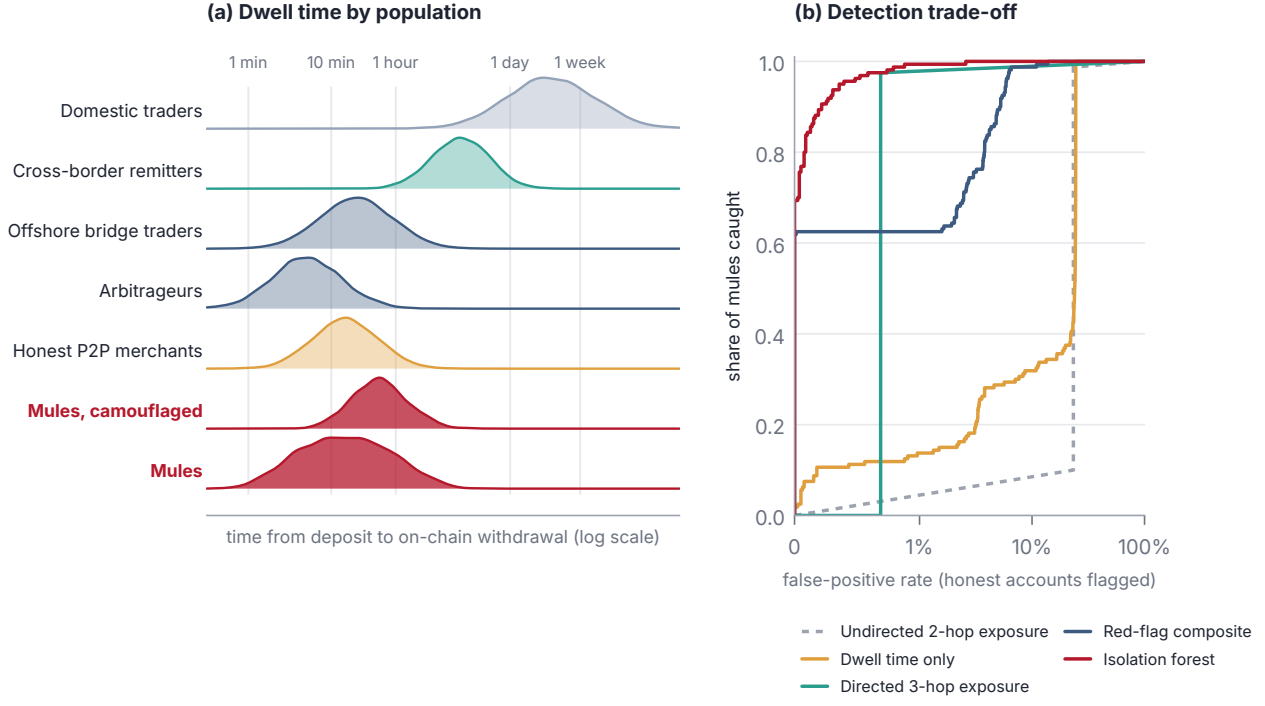
Speed alone cannot separate mules from arbitrageurs and honest dealers

Panel (a): kernel densities of withdrawal speed. Panel (b): ROC curves at low false-positive rates (symmetric log x-axis). One simulated exchange-year with 2% mule accounts.



SIMULATED DATA · METHOD VALIDATION ONLY

Mules draw their own tradecraft: exit speeds from 3 to 90 minutes, 40% camouflaged with rented aged accounts. Blacklists cover 70% of layering wallets within two hops.
