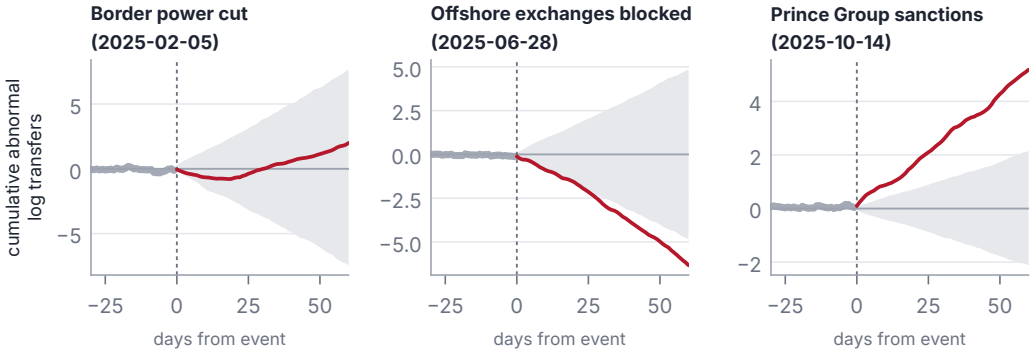
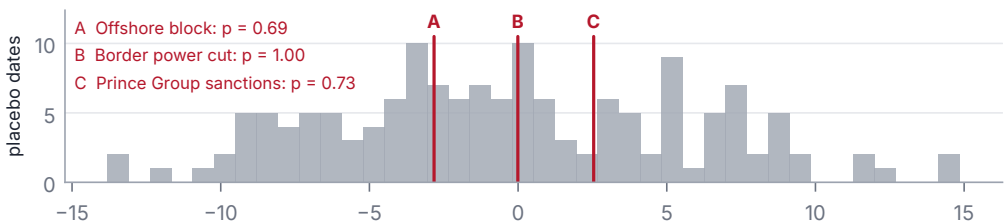
Chain-wide data cannot see a national crackdown

Tron USDT transfer counts. Nominal 95% bands reject at 58% of random dates; placebo-calibrated p-values are the honest test.





30-day cumulative abnormal log transfers. Grey: 149 placebo dates; red: the three shocks; p = share of placebos at least as extreme

Source: Coin Metrics Community Data (usdt_trx TxTfrCnt). Counterfactual: log-linear trend with day-of-week effects fitted on days -150 to -31; moving-block bootstrap bands.
